## Google Meet video conferencing platform improved

29th April, 2020

Google has 1 its video conferencing platform Meet to be able to 2 with other platforms such as Zoom and Microsoft Teams. A new feature of Meet 3 that users can now 4 the faces of 16 people on their screen. Previously, people could only see four people on their screen at one time, but with Meet's new tiled layout, people can now 5 16 participants at once. Meet's new gallery view 6 at a time when more and more people are 7 video conferencing services across the world. Many people are 8 family and friends during lockdown; companies are 9 online meetings; and schools and universities have 10 their operations to be able to teach online.

Google said the improved Meet platform would 11 millions around the world in times of lockdown. It 12: "Remote work has 13 increasingly necessary for public safety and wellbeing -which 14 staying connected, even while we're apart, more important than ever." It added: "Each day, a rapidly growing number of people 15 on Google Meet, and we 16 to make sure they have the features they 17 to share and 18 productive."

Google said it would introduce more new features such as the ability to 19 out background noise. This will end the noise of keystrokes as other people type while online. Users will also be able to 20 video quality if the lighting in their room is not sufficient.
